APIS FOR DEVELOPERS • READY TO INTEGRATE • PRODUCTION-READY

Find and buy APIs the way developers expect — clean, documented and supported.

Curated marketplace of REST, SOAP, GraphQL and custom API handlers (SQL, MongoDB, HANA, Fetch, JavaScript handlers). Faster integrations, clear pricing, and tools for automation and AI workflows.

Explore APIs   List your API   Trusted by teams & integrators

For Developers

Built for technical buyers — clear specs, examples, and SDK-ready endpoints.

Search APIs by name, handler, category, or tag   Sort: Relevance   Search   Advanced

☐ Free   ☐ Paid   Category   All

Featured: OpenFusionAPI — Secure SQL & Mongo handlers

Production-ready connectors, example code and free sandbox access.

6 APIs found

SQL Handler API — Menu Service

Free tier

Handler: SQL • Method: GET • Example: /api/pizza/get/menu

Query-backed API that retrieves menu items. Compatible with PostgreSQL, MySQL, SQL Server via Sequelize.

Docs: Detailed SQL examples & JSON schema

Docs   Integrate

MongoDB Handler — User Profiles

$49/mo

Handler: MongoDB • Method: POST • Example: /api/users

Schema-transparent endpoints using Mongoose. Ideal for document-oriented data and fast prototyping.

Docs: usage examples & sample JS

Docs   Buy

SOAP → REST Adapter

$35/one-time

Handler: SOAP • Method: POST • Example: WSDL powered

Convert legacy SOAP services into JSON REST endpoints. Automatic WSDL parsing and function mapping.

Docs: WSDL examples & transform rules

Docs   Buy

Fetch Proxy Handler

Free

Handler: FETCH • Method: GET • Example: Proxy other services

Proxy any HTTP service through secure OpenFusion endpoints. Useful for CORS, token management and central monitoring.

Docs: examples & headers

Docs   Integrate

JavaScript Handler — Custom Logic

$99/mo

Handler: JAVASCRIPT • Method: ANY • Example: Runs inline JS

Write custom server-side logic directly in the endpoint editor. Use included helpers for fetch, tokens, DB and LangChain.

SAP HANA Connector

$199/mo

Handler: HANA • Method: POST • Example: SAP HANA queries

Direct SAP HANA queries with parameter binding and secure connection templates.

Docs: connection templates & params

Why OpenFusionAPI?

✓ **Speed:** Pre-built handlers reduce integration time from days to hours.

✓ **Consistency:** Centralized authentication, logging, and monitoring for all APIs.

✓ **Flexibility:** Mix SQL, NoSQL, SOAP and custom JS logic in a single app.

✓ **AI-ready:** MCP tooling and JSON Schema support for building AI-accessible tools.

For technical buyers

Detailed endpoint docs, sample payloads, authentication options (token / basic) and environment-specific app variables — all designed to make evaluation and integration predictable and secure.
